

**Original equipment crane parts:**  
 – Lead times too long? – Pricing out of control?

**REVERSE ENGINEERING** just might be the answer!

Morris Material Handling has the answer to critical parts issues with our **Reverse Engineering Process (REP)**. With REP, any part can be manufactured **for any brand** of crane to meet or exceed the original specifications.

**Other reasons to use REP:**

- The original drawings have been lost or destroyed.
- The quality you're currently receiving from your local machine shop is a concern.
- The OEM is no longer in business.

REP delivers improved pricing, quality & lead times on parts for **all brands of cranes!**

**REP BEGINS WITH 1 OF 3 OPTIONS:**

**1 Existing Part Analysis**

Part(s) sent to Morris and reverse-engineered by our skilled REP team.

**2 On-Site Dimensions**

The part is measured onsite and a rough drawing of the required part is completed.

**3 Original Drawings**

Existing OEM drawings are supplied to Morris.
